

BG-Homescent for the indoor trap “BG-Home”

Effectiveness: up to **one month**.

The BG-Homescent uses the same formulation to imitate the human skin as the BG-Sweetscent. It is developed to be used with the **BG-Home indoor trap**.

The new BG-Sweetscent comes as a pad filled with the three volatile components in granular form. For the same price as the old one, the new BG-Sweetscent offers the following improvements:

- A more natural emission pattern – the spatial distribution of the cocktail of active molecules is more equally mixed and resembles the natural emission of human skin odours.
- Better protection against environmental influence – the waterproof envelope allows a diffusion of the components through the membrane. At the same time the components are protected against rain, humidity and light.
- Improved emission profile – the ingredients are formulated into specific polymeres that provide a controlled release of the active ingredient.

A more natural emission pattern

Old BG - Sweetscent with the components separated from each other.

New BG - Sweetscent with polymer particles that provide a more uniform mixture of the volatile blend.

Remove the BG-Homescent from the plastic package.

Place the BG-Homescent (do not open it) at the bottom mosquito catch tray of Biogents Home mosquito trap.
