

Art. 372 MO-STICK INOX

These have been specially manufactured for HACCP system application in those areas where maximum hygienic measures are required.

THE STRUCTURE

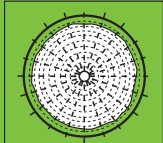

This item is made of AISI 304 stainless steel, welded and treated to be used in areas where food is produced. This model is water-proof and impermeable to dust and vapour thanks to the hermetic lamp holder, the rubber cable and hermetic shock proof plug and the gasket between body and cover it is equipped with. **MO-STICK** trap allows monitoring the captured insects and can be used even in those areas subject to explosive or inflammable atmospheres, such as sugar-refineries and cellars. **MO-STICK** is very easy to clean; simply wipe and wash clean, and replace the adhesive papers. The clean, elegant design makes this device a decorative, noiseless, discreet item; it also hides insects from view. **MO-STICK** can be hung from the ceiling by means of two practical chains, mounted on the wall or simply lean against the wall.

THE LAMPS

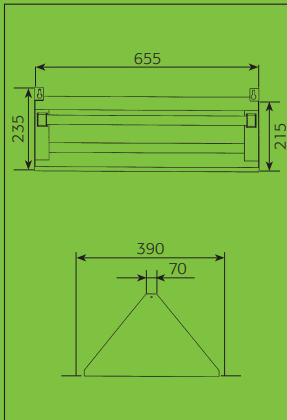

The two powerful UV-A 40 Watt lamps mounted on hermetic lamp holder, are equipped with unbreakable sheaths to protect the tube. If the glass should break, it will not scatter around, and at the same time, lamp gases will not escape. The sheath is completely transparent to UV-A rays.

SAFETY

This item is IMQ approved for the IP65 class and conforms to CE standards.

COVERING
850 m²

TECHNICAL FEATURES

Dimensions in cm	65,5x39x23,5 cm (H)
Weight	8,8 Kg
Power supply	230V/50Hz → CE
Total consumption	95 W
UV-A Lamps	2x40 W shatter proof
Lamp life	2000 hours
Feeding cable	Neoprene
Protection	IP65
Standard accessories	Chain - adhesive paper
